

❖ Problem Statement

Analyze the Brazilian e-commerce marketplace to understand customer behavior, seller performance, product trends, delivery efficiency, and payment preferences.

❖ Key Findings

- Customers concentration is high in certain states.
- 6 states : SP, RJ, MG, RS, PR, SC cover 80% of entire customer base.
- Average retention period of customers is 3.69 days
- Majority of customers are new customers as the majority retention period is 1 day
- Average order value is 200\$
- Avg approval time: 0.51 days
- Avg shipping time: 3.28 days
- Avg Delivery time : 12.42 days
- % of Late orders : ~37%
- Products sales are concentrated around certain products
- There is a seller concentration risk
- Majority of transactions happen with credit card & wallet

❖ Recommendations

- Increasing marketing spend in customer concentrated states
- Increasing seller diversification
- Improving partnership with the sellers in the concentrated states
- Working to reduce delivery time.
- Strengthen partnership with payment partners
- Providing more deals on the major purchased products
